Prueba la nueva tecnología PowerShell multiplataforma https://aka.ms/pscore6

PS C:\Users\Antonio Montero> wsl
montero@DESKTOP-DRRIU84:/mnt/c/Users/Antonio Montero$ wsl.exe -l -v
  NAME                                STATE      VERSION
* Ubuntu-18.04                        Running     2
  docker-desktop-data                  Running     2
  docker-desktop                       Running     2
montero@DESKTOP-DRRIU84:/mnt/c/Users/Antonio Montero$ |
```

Nos aseguramos de que Docker está correctamente instalado

```
montero@DESKTOP-DRRIU84: / x + v
montero@DESKTOP-DRRIU84:/mnt/c/Users/Antonio Montero$ docker --version
Docker version 19.03.13, build 4484c46d9d
montero@DESKTOP-DRRIU84:/mnt/c/Users/Antonio Montero$ |
```

Usamos el comando de ejemplo para ver que funciona

```
montero@DESKTOP-DRRIU84: / x + v
montero@DESKTOP-DRRIU84:/mnt/c/Users/Antonio Montero$ docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

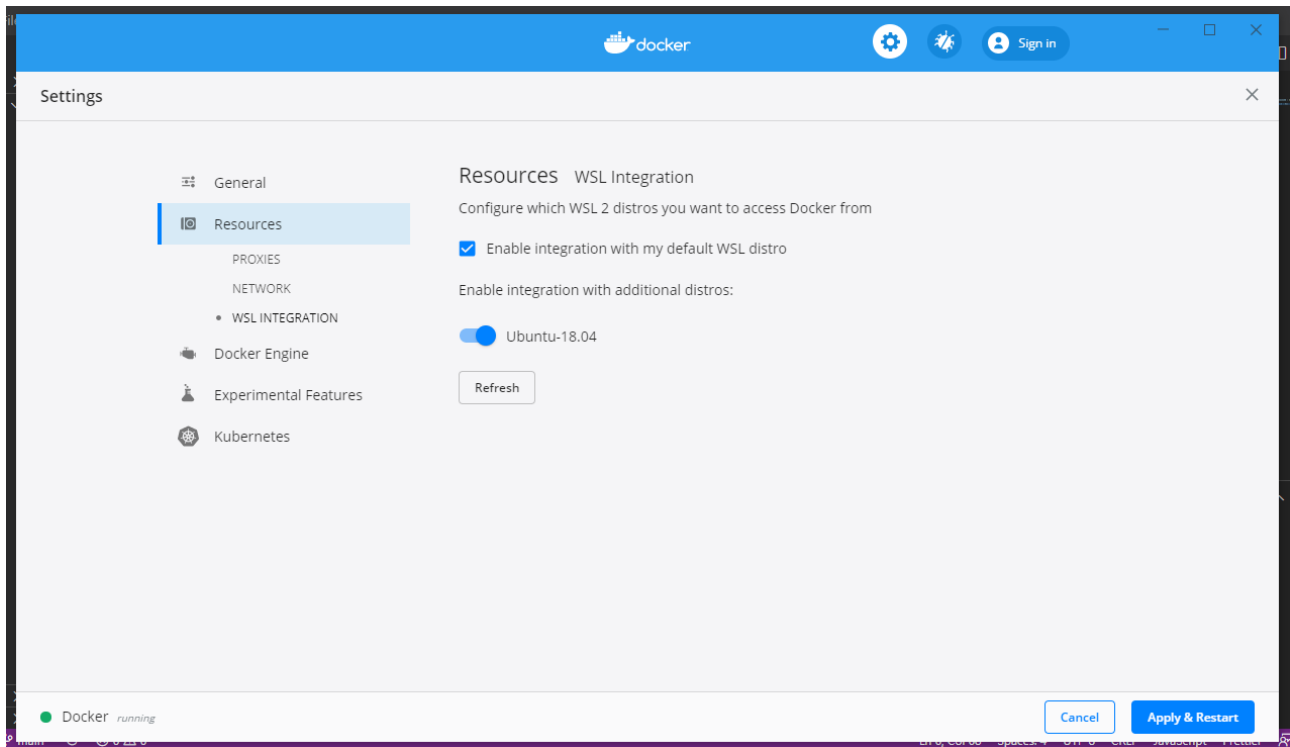

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.      (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/
